NOTICE TO CUSTOMERS OF THE BEACON HILL WATER SYSTEM

Dear Customer:

In keeping with the National Primary Drinking Water Regulations, we are obliged to inform you that Loudoun Water may be in violation of state regulations.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During August 2011, we did not monitor or test for coliform bacteria and disinfectant residual, therefore we cannot be sure of the quality of our drinking water during that time.

One routine sample for bacteriological analysis was required and none were analyzed. Disinfectant residual measurement, required at the same time as the collection of the bacteriological samples, was also not analyzed.

Past records show that the system has had no problems with bacteriological contamination and the routine samples for the months of September, October, November and December were taken and found no bacteriological contamination.

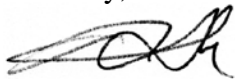

There is nothing you need to do at this time.

We are attempting to prevent further violations by ensuring that all required sampling in our distribution system is done in accordance with that state drinking water regulations. Future violations will be reported as required by state regulations in order to increase consumers' awareness of conditions that exist in their public water system.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

For more information, please contact Mike McGill, Manager of Community Relations, at mmcgill@loudounwater.org or (571) 291-7969.

Sincerely,

Mike McGill
Manager of Community Relations
Loudoun Water
