

MEMORANDUM TO THE INDUSTRY

TO: All Builders, Developers, Engineers, and Contractors
FROM: Huy Tran, P.E. – Manager of Land Development Programs
DATE: October 31, 2016
SUBJECT: Loudoun Water – Engineer Design Manual 2016 Update

The Loudoun Water Engineering Design Manual (EDM) has been updated and is available at <https://www.loudounwater.org/engineering-design-manual>.

The EDM was last updated in 2013 and the 2016 edition primarily focuses on documenting many Loudoun Water processes which have already been in place, as well as updates to the standard details with a goal of providing greater clarity.

Earlier this summer, Loudoun Water formed a working group with industry representatives from NVBIA and NAIOP where all the EDM changes and modifications were reviewed by engineering and development professionals from the industry groups.

The 2016 EDM edition goes into effect today ***October 31, 2016***. Many of the processes have already been implemented and because the majority of the updates are minor in nature, we do not anticipate this implementation causing delays or the need for redesign of the projects already in construction.

Please let either myself and/or Ms. Robyn Bailey, Loudoun Water's Business Relations Manager, know if you have concerns. If you have any questions, please do not hesitate to contact us at:
